Put the chaises back in place.

PUBLIC SERVICE ANNOUNCEMENT: on Behalf of Hummingbirds:

This hummingbird is unable to retract her tongue due to fungal spores that have germinated on her tongue or in her gullet caused by folks mixing honey or anything other than white cane sugar with water. She will die because she can no longer feed.

If you have feeders, PLEASE USE ONLY WHITE CANE SUGAR in your mixture of 1 part sugar to 4 parts water. No organic or raw or brown sugar, no powdered sugar, no honey, no artificial sugar. Use white CANE sugar/water mixture which is most similar to actual flower nectar. And no toxic red color liquids such as koolaid etc.. !

Change the sugar water mixture every couple of days, especially during high temperatures, as it will start to ferment if it sits out for days on end. If you can't or won't do this, please do not put out a feeder at all.

DRYER FIRES

The most common cause of dryer fires is lint that builds up in the dryer vent.

Lint is hugely combustible and can quickly burst into flames when there is not enough air circulation from the dryer vent to the outside of the building.

Caring for your dryer will help keep it running longer. Regular maintenance should include cleaning the dryer vent. If your clothes are taking longer than a half-hour to dry or if the dryer is hot to the touch when it is running, it is time to clean the dryer vent.

How Often Should You Clean the Dryer Vent?

The dryer vent should be cleaned about once a year on average. If you dry four or five loads of clothes daily, you may need to clean it as often as every six months. If you are only drying a load or two a week, you can probably get by with cleaning the dryer vent about every 18 months. For average use--two or three loads of clothes two or three times per week--cleaning your dryer vent once a year should keep it in good condition. It also helps to clean your lint trap after every use

How Do You Clean the Dryer Vent?

Examine the outside dryer vent when the dryer is running to make sure exhaust air is escaping. If not, the exhaust vent or duct might be blocked. To clear a blockage in the exhaust path, you may need to disconnect the exhaust. Periodically clear lint buildup from behind the dryer. You may want to hire a professional to clean the inside of the dryer chassis occasionally to prevent lint from accumulating.

Replace the foil or plastic accordion-style duct material with corrugated semi-rigid or rigid metal ducting. This will help provide maximum airflow. The flexible foil or plastic duct works nicely for trapping lint, but it does not hold up as well to crushing or kinks that will reduce airflow.

Who Can I Call to Clean My Dryer Vent?

Some local dryer vent cleaning companies are:

MicroClean Technology	(843) 689-9191
Ugly Duct Cleaning	(843) 816-0537
Air Duct Doctor	(843) 263-8011
